

Atomic Habits

James Clear

8-slide visual summary

Core concepts • mental models • easy-to-remember diagrams •
practical takeaways

The 1% Idea

Tiny improvements compound into remarkable change.

Results lag behind the habits.

- Small actions become powerful when repeated.
- Consistency beats occasional intensity.
- Build systems, not just goals.

The Habit Loop

Every habit follows a repeatable four-step pattern.

- Cue → Craving → Response → Reward.
- Make good habits obvious and attractive.
- Reverse the laws to weaken bad habits.

Identity First

Lasting change starts with the person you want to become.

- Outcome: what you want.
- Process: what you do.
- Identity: who you become.
- Each repetition is a vote for your identity.

Environment Beats Willpower

Design the environment so the desired action is the easy action.

Design the path before relying on willpower.

- Put cues in sight.
- Remove friction from good habits.
- Add friction to bad habits.
- Use a consistent context.

Make It Easy

Reduce the effort needed to start.

- Use the Two-Minute Rule.
- Shrink the first step.
- Optimize for repetition before intensity.

Never Miss Twice

A missed day is recoverable; a repeated pattern is the real problem.

The goal is fast recovery, not perfect streaks.

- Track what you do.
- Recover quickly.
- If a habit keeps failing, redesign the system.

Memory Map

Identity → System → Repetition → Compounding

- Be the person.
- Design the environment.
- Make the action easy.
- Repeat long enough for results to appear.
