

Thinking, Fast and Slow — Revision Booklet

Daniel Kahneman • 2-page rapid revision • Concepts → Mental model → Recall questions

30-second mental model: Read the bold chain below, then try to explain the book without looking at the page.

System 1 → Bias Risk → Slow Check → Base Rates → Better Judgment

CORE CONCEPTS

- System 1 = fast, automatic, intuitive; System 2 = slow, effortful, deliberate.
- Intuition is useful but vulnerable to predictable biases.
- Anchoring: initial numbers/reference points influence later judgment.
- Availability: vivid/easily recalled examples can distort probability.
- Representativeness: similarity can substitute for statistical reasoning.

CORE CONCEPTS — CONTINUED

- Loss aversion: losses often feel stronger than equivalent gains.
- Overconfidence: confidence can exceed actual accuracy.
- Use base rates and outside-view evidence.
- Slow down for high-stakes, complex, statistical or irreversible decisions.

Thinking, Fast and Slow — Active Recall

Close the book. Answer these from memory. Then revisit only the concepts you missed.

1. Which System 1 bias might affect my current decision?

2. What is the base rate?

3. What evidence would change my mind?

One-sentence teach-back: Explain the entire book to someone in one sentence.

Top 3 ideas I will apply: 1) _____ 2) _____ 3) _____
